

TECHNICOLD

by NORTHERN LIGHTS

Technicold is pleased to introduce Blue-Tube UV lamps for our line of world class air handlers.

The proven anti-microbial power of UV light is available in your Technicold air handler. As a custom option on draw-through or blow-through air handlers, 8000 - 32000 BTU, the industry leaders at Technicold have partnered with Fresh-Aire UV to offer a clean, economical safeguard against air borne contaminants. UV light inhibits mold and algae growth in the evaporator, blower housing and drain pan. Unlike some competitors who install UV bulbs in the ducting, Technicold installs our lighting solutions directly in the air handler, reducing odor, energy and maintenance costs.

Like all Technicold-backed products, the Fresh-Aire UV is ingeniously simple, while being built to thrive in the harsh marine environment.

Chose the peace of mind that comes with owning the best - chose Technicold by Northern Lights.
